

When we look around...

Stars

The stars are objects that emit light. The closest star is the Sun.

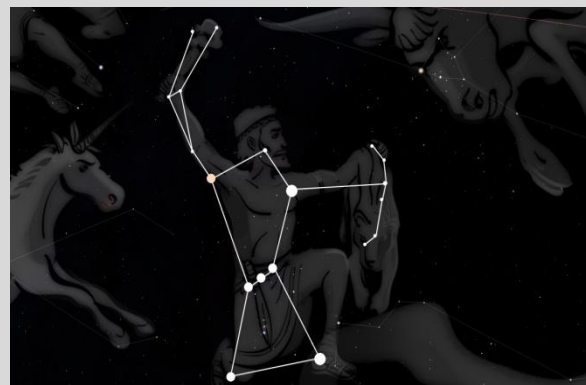

Planets

The planets, unlike stars, do not emit light but may reflect starlight.

Constellations

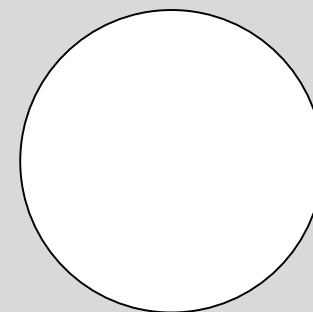

Sometimes a set of stars resembles the shape of a person, animal or object. This imaginary shape is called a constellation.

Orion Constellation.

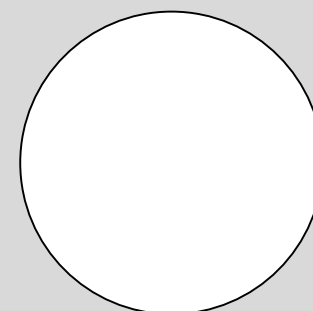

Can you draw and paint?

A star, for example the **Sun**:

A planet, for example the **Earth**:

Can you discover the most important stars of a constellation?

Ursa Major Constellation.
